ACKNOWLEDGEMENT

With the deepest gratitude I wish to thank every person who has helped me in this project.

I would like to acknowledge and express my gratitude to the following people for the magnificent support and contribution to my journey and to the creation of this project. For generously sharing the wisdom and love I homage to my parents and my computer teacher Ms. Priyanka whose teaching lit a burning fire of desire within me.

Also to my friends and to all who journeyed with me in the completion of this project.

You can mail me your suggestions/feedback. My e-mail ID is nilaybhatia99@gmail.com.

SYNOPSIS

WE live in a world today where technology and the internet is a part of our everyday lives.

The way we shop has radically changed over the last decade. With the mushrooming of malls, branded stores and high couture outlets there is no dearth of options for the Indian consumer. With all the emerging options in variety and selection it comes as no surprise that the Indian online retail industry has also seen a radical surge in growth. With options galore for everything under the sun including furniture, electronics, books, groceries, appliances and entertainment, there is scarcely any item that can't be yours in just a few clicks.

Keeping this in mind, Amazon.in is an online shopping application that allows you to buy products. It is a useful application because it is user friendly. It is a small scale replication of the actual Amazon site.

The program has the following features:

- You can create your own account and then login to buy products.
- The project uses Exception Handling; so only correct inputs will be taken.
- You can buy from the following three categories.
 1. Mobiles and tablets
 2. Desktops and laptops
 3. Books
- You can enter your choice by keyboard. You will then be asked for the quantity.
- A special option called Deals of the Day has a few products at a discounted price. These products vary every time you select the option.
- Your bill will be automatically generated and the amount will be printed. The amount is payable on delivery of the product.

CONCEPTS IMPLEMENTED

- I/O statements
- Loops
 - For loop
 - While loop
 - Nested for loop
- Decision statements
 - If
 - If-else
 - Switch case
- Escape sequences
 - \f
 - \n
- Arrays
 - Single Dimensional array
 - Performing linear search on the array
- Object creation
- Functions
 - Non-parameterized
 - Receiving values but not returning outcome to the caller
- String manipulation
- System.out.println statements
- Exception handling (try-catch)

- Continue and break statements
- Operators
 - Arithmetic
 - Unary
 - Relational
 - Logical
- Constructors
 - Default constructor
- Random function
- Static variables
- Date class

Source code

LIST OF VARIABLES

Sr. no.	Data type/Class	Name of variable/object	Description
1	int	i	to accept input in main menu
2	String	user_name[]	to accept user name during signup
3	String	user_name1	to accept user name during login
4	String	pass[]	to accept the password during signup
5	String	pass1	to accept password during login
6	String	mail	to store user's e-mail ID
7	int	j	counter for loop
8	long	j	counter for null loop
9	long	m	to store customer's mobile no.
10	String	mb	to store mobile no. as String
11	int	choice	to take user's choice
12	int	len	to store length of model name
13	int	c	counter for loop
14	int	r1	random number to select an array
15	int	r2	random number to select an array
16	int	r3	random number to select an array
17	int	d1	to determine discount on mobiles
18	int	d2	to determine discount on laptops
19	int	d3	to determine discount on books
20	int	custChoiceno	to take user's product's serial no.
21	int	custQuan	to take quantity of the product
22	int	custInd	to add multiple items to the customer's cart
23	String	custChoice	to store user's product choice
24	int	custChoiceno	to accept user's product choice no.
25	int	custPrice	to store price user's choice
26	String	prod[]	to store bought products in cart
27	String	prodPrice[]	to store price of the bought item in cart
28	String	prodQuan[]	to store quantity of the bought item in cart
29	boolean	b	to check if user has paid the bill
30	double	custTotal	to print total on the bill
31	int	cust	to keep track of multiple customers
32	boolean	flag	to check whether the user has paid the bill or not
33	double	d	counter for loop
34	String	g	to store date
35	long	i	counter for loop
36	int	currentUser	to store the current user during Linear search
37	String	mobName[]	to store mobile's name
38	int	mobPrice[]	to store mobile's price
39	String	mobOs[]	to store mobile's OS name
40	String	mobSize[]	to store mobile's screen size
41	String	mobCam []	to store mobile's camera size
42	String	lapName[]	to store laptop's name

43	String	lapOs[]	to store laptop's OS name
44	int	bookPrice []	to store laptop's price
45	String	lapSize []	to store laptop's storage capacity
46	String	lapScreen[]	to store laptop's screen size
47	String	bookName[]	to store book's name
48	String	bookAuth[]	to store author's name
49	int	bookPrice []	to store book's price
50	String	bookPub []	to store book's publisher

Handling multiple users

CONCLUSION

Thus at the end of this project we can say that the project has satisfied the consumer to the best of its ability and has helped him buy a suitable product. This program is error free and can handle exceptions.

Thus we can say that the goal of the project has been fulfilled.
